SUMMARY

I am a Front-End Developer and UI/UX designer combining a technical background in software engineering with a passion for Web Development and AI. Experienced in managing group projects, leading discussions & communications, and delivering presentations translating technical solutions into practical, client-focused results. I work with React, TanStack, NextJS for UI, Supabase & MongoDB for database and Vercel, Render & Hostinger for hosting. I actively use AI coding agents, SKILLS, MCP servers and experienced with ML and Data Analysis.

PROJECTS & RELEVANT EXPERIENCE

Used Cars Price Prediction with XAI – AI Software Development → <https://car-prediction-insights.vercel.app/>

- Built an end-to-end ML pipeline pre-processing **10M** used car listings (~3GB CSV), reducing memory by **72%** via optimized dtypes (from 1.5GB to 420MB RAM), feature engineered 10+ features, encoded and scaled them.
- Trained 3 GBT ML models : LightGBM, XGBoost, CatBoost and achieved **90%** accuracy (R2). Performed 5-fold cross-validation and hyper-parameter tuning, with visual diagnostics (fold-vs-R² line charts, box plots).
- Built a **React + TypeScript SPA** (Vite, Tailwind CSS, shadcn/ui, Recharts) with 12-input prediction form, 7 live parallel API calls to backend for XAI graph dashboard, quality metrics and budget-matching recommendations.
- Architected **FastAPI backend** (Uvicorn, Pydantic) with **12+** REST endpoints, sub-second cached inference (joblib, LRU cache), 50K-car recommendation engine, deployed on Render (backend) + Vercel (frontend).

Personal Portfolio – Automated Website → <https://salmankalam.github.io/>

- Built a fully **automated portfolio system** that fetches new GitHub repos daily, deploys frontends to **GitHub Pages**, and captures screenshots of every live project using headless **Playwright MCP** server.
- Classifies each repo into Frontend/ Backend/ Data Analysis and auto-generates summaries and tags from READMEs, keeping the portfolio fresh without manual editing.
- Wired the whole pipeline into **GitHub Actions** so new projects are hosted, documented, and added to the site automatically within a day of being pushed.
- Designed a **React + TypeScript + Vite** UI with animated project cards, category filtering, and per-project lightbox previews, all driven by a single generated `repos.json` data file.

Team Leader – Web Development Group Project → <https://rivo-vogue1.odoo.com/>

- Led a team of **5 persons** to design and develop an e-commerce application using a **CMS platform** (Odoo).
 - Implemented user authentication, email service, checkout service, invoice service, personal dashboard.
 - Conducted online meetings, distributed tasks, and ensured timely completion of milestones.
 - Provided technical guidance and resolved team challenges, improving workflow and communication.
 - Compiled and audited project report, delivered presentation summarizing technical achievements and outcomes.
-

EDUCATION

Bsc Computer Science

University of West London

2023 - 2026

- Relevant coursework: Human Centered Computing(HCC) and Applied Software Engineering(ASE)
-

ADDITIONAL INFORMATION

- **Technical Skills:** UI/UX, Backend, RESTful API, OOP, Agile SDLC, Version Control, RDBMS, DSA
- **Tools:** Figma, WordPress, PostgreSQL, MongoDB, Git, GitHub Actions, NextJS, Jira, MCP Servers
- **Programming Languages:** HTML5, CSS, JavaScript, TypeScript, ReactJS, Java, Python, SQL
- **Languages:** English (Proficient), Hindi (Native), Arabic (Basic)
